

Amendments to the Specification:

Please amend the paragraph beginning on page 11, line 12 to read as follows:

Three mixtures (50 mL each) with the following compositions 1, 2, and 3 were prepared. A ~~340 mm~~ 0.34 mm thick filter paper ("Whatman 3MM Chr" produced by Whatman) was immersed in each of the mixtures. Then, the filter papers were dried at 50°C for about 10 minutes, cut to 5 mm (length) × 5 mm (width), and stuck on PET films by a double-sided adhesive tape, thus providing test pieces. These test pieces impregnated with the mixtures having the compositions 1, 2, and 3 were identified as examples 1, 2, and 3, respectively. As the compound, Eriochrome Cyanine R (produced by Nacalai Tesque, Inc.) of the formula (6), Chrome Azurol S (produced by of Nacalai Tesque, Inc.) of the formula (4), and Chromazurol B (produced by DOJINDO LABORATORIES) of the formula (5) were used.
